 Abschalten
Débrancher
 Desconectar
Uitschakelen
 Stäng av

These units are suitable for wall or ceiling mounting on combustible surfaces in interior situations (IP20) as supplied, and exterior situations (IP23) in conjunction with gasket accessory 0005 A02. They are primarily designed for installing in conjunction with a flush mounted British Standard conduit box having 50.8mm (2") fixing centres.

Ensure the mains electrical supply conforms with the rating marked on the label.

If in doubt regarding any aspect of the electrical installation, consult a qualified electrician.

TO INSTALL THE UNITS PROCEED AS FOLLOWS:

Switch off the mains electrical supply.

Remove the diffuser from the gallery by twisting a coin in the slot provided between them.

Remove the gear tray by loosening the two 'captive' retaining screws and lifting it from the gallery.

Clear the appropriate fixing holes in the gallery and, for exterior mounting of the 1028 Type, the drain hole which is situated on the inside wall of the gallery.

If necessary, provide suitable fixings (eg. wall plugs) in the mounting surface to correspond to the fixing holes of the gallery.

Pass the flying leads through the central cable entry hole in the gallery and through the gasket accessory, if appropriate.

Offer the gallery to the mounting surface and connect the flying leads Brown-Live (L), Blue-Neutral (N) and Green/Yellow-Earth (≡) to the corresponding mains supply leads using a suitable terminal block.

Locate the terminal block in the conduit box.

Fix the gallery, and gasket accessory if appropriate, to the conduit box using suitable screws. Note that for wall installation the attitude of mounting is as illustrated.

Locate the gear tray in the gallery and secure it by tightening the retaining screws. Note that for wall mounting, the lampholder/s should be towards the top.

Fit the appropriate lamp/s to the lampholder/s.

Snap the diffuser onto the gallery.

INTERNAL CONNECTIONS TO THE MAINS SUPPLY

In the event that it is necessary to make the mains supply connections within the luminaire (ie. at the fused terminal block on the rear of the gear tray) precautions should be taken to prevent the PVC insulation on the mains supply wires making contact with the choke/ballast which can have an operating temperature of up to 85°C. Suitable precautions would be careful routing of the mains wires or the use of protective sleeves.

Replace any cracked protective shield.

Dieses symbol bedeutet, dass defekte Schutzgläser sofort ersetzt werden müssen.

Ce symbol indique que vous devez remplacer tout verre de protection fêlé.

Este simbolo indica que hay que reemplazar filtros en caso de rotura o desperfectos.

Dette symbolet indikerer at alle odelagte (sprukne) sikkerhetglass må skiftes.

Valaisinta ei saa käyttää ilman suojalasia vioitunut suojalasi on vaihdettava uuteen ennen valaisimen käyttöön ottoa.

Suitable for use indoors
 Geeignet für Innenanwendung
Pour un usage interne
 Adecuada para uso en interiores
Geschikt voor gebruik binnen
 Lämpelig för inomhusbruk
