 Stäng av

This extra low voltage (i.e. 12 volt) luminaire has been designed for interior ceiling mounting and is suitable for mounting in combustible surfaces, as indicated by the symbol on the luminaire label. The luminaire does not require earthing and should be used in conjunction with Marlin MTC050/100/200/300/400 or 500 type transformers.

A ceiling aperture of 120mm diameter and a recess depth of 165mm is required to accommodate the luminaire housing.

The distance between the lamp and any lit object must not be less than 1150mm as indicated by the 1.15m symbol on the luminaire label.

It is recommended that installation is carried out by a suitably qualified person, in accordance with I.E.E. Wiring Regulations and in particular Section 411, which relates to extra low voltage installations.

These instructions should be read in conjunction with those for the transformers, reference leaflet 0165-2991.

INSTALLATION PROCEDURE

Determine the luminaire location and prepare a 120mm diameter hole in the mounting surface.

Extract the mounting clips from the luminaire housing as shown in Figure 1.

Offer the housing to the aperture and connect the supply cable leads directly or indirectly via a suitable junction box to the transformer output terminals.

Insert the housing in the aperture and secure it in position with the mounting clips as shown in Figure 2, utilising the lower clip positions for 5 to 15mm ceiling thickness or the upper positions for 15 to 25mm ceiling thickness.

Attach the lead spade connectors to the lamp spade terminals. Place the lamp in the outer trim bezel and push the bezel onto the housing ball catches.
